EDUCATION

Manav Sthali School

Grade - 94%

New Delhi, India

Aug. 2013 – May 2021

Vellore Institute of Technology

Computer Science with specialization in AI & ML

Chennai, India

Aug. 2021 – Aug. 2025

EXPERIENCE

Software Development Engineer (SDE 1)

May 2025 – Present

LENS Corporation

Gurugram, HR

- **System Architecture:** Engineered a **Railway Arbitration Portal** and **Vehicle Telematics** system using **NestJS** and **FastAPI**, integrating real-time video streaming, geospatial tracking, and automated workflows.
- **Infrastructure & Security:** Architected a **Multi-tenant RBAC (IAM)** system and containerized **Microservices** via **Docker**, ensuring system availability and granular data isolation for enterprise clients.
- **Data Strategy:** Orchestrated a **Polyglot Persistence** layer (**PostgreSQL/Neon, MySQL, Avian**) and **Redis** caching, optimizing data routing and reducing end-to-end **API latency**.
- **API Engineering:** Developed and optimized **RESTful APIs** with **Swagger/OpenAPI** documentation, streamlining cross-team integration and ensuring scalable communication between frontend and distributed backends.

Artificial Intelligence Intern

Jan 2025 – Mar 2025

Hapticware Intelligence Pvt. Ltd.

Remote

- **Generative AI & RAG Orchestration:** Engineered an automated financial analyzer using **RAG patterns** with **LlamaIndex** and **LlamaParse**, increasing data extraction precision for unstructured quarterly reports.
- **Cloud AI Deployment:** Integrated frontier models (**Anthropic Claude, Meta Llama**) via **AWS Bedrock**, architecting a summarization engine that reduced processing latency and boosted analyst throughput.
- **Production NLP Pipelines:** Developed automated **NLP workflows** to transform complex financial data into structured insights, leveraging **asynchronous processing** to ensure production-level scalability.

PROJECTS

AI-Powered Voice-to-Voice Interviewer | *LangChain, OpenAI, Deepgram, FAISS, FastAPI, React*

[GitHub](#)

- Engineered a low-latency voice-to-voice system using **WebSockets** and **Deepgram STT**, leveraging **LangChain** and **GPT-4** to conduct context-aware, autonomous technical interviews.
- Implemented **FAISS** for semantic resume parsing and **RAG-based** question generation, enabling intelligent candidate-job matching and automated ATS scoring with 30% higher precision.
- Built an asynchronous **FastAPI** backend with **MongoDB**, managing complex stateful interview sessions and delivering real-time candidate assessments across multiple performance dimensions.

Distributed Remote Access & Monitoring System | *Go, NestJS, TypeScript, Socket.IO, PostgreSQL, Docker*

[GitHub](#)

- Developed a concurrent **Go-based agent** supporting Windows, macOS, and Linux, implementing real-time shell execution and asynchronous file operations via custom **WebSocket** protocols.
- Architected a **NestJS** backend utilizing **Prisma ORM** to manage persistent agent connections, enabling low-latency system telemetry monitoring and remote device control across distributed networks.
- Engineered automated **Network Scanning (ARP/ICMP)** and multi-platform deployment pipelines, creating minimal shell agents for resource-constrained **IoT/Router environments**.

Distributed Auth & Session Engine | *NestJS, GraphQL, Redis, MySQL, Bcrypt, TypeORM, Docker*

[GitHub](#)

- Engineered a high-performance **Passport-free authentication** engine using **NestJS** and **GraphQL**, implementing **JWT** and **Bcrypt** for secure registration and stateless authorization.
- Integrated **Redis** for distributed session storage and token blacklisting, optimizing authentication lookups and ensuring session persistence and scalability across microservices.
- Architected a robust database schema using **TypeORM** and **MySQL**, containerizing the environment with **Docker** to ensure consistent development-to-production deployment orchestration.

TECHNICAL SKILLS

Languages: TypeScript, Go, Python, JavaScript, C++, C, SQL (PostgreSQL, MySQL)

AI & Machine Learning: LLM Orchestration (LangChain), RAG (LlamaIndex, LlamaParse), Vector Search (FAISS), Generative AI, NLP, Computer Vision (YOLOv8)

Backend & Systems: NestJS, FastAPI, Node.js, Microservices, REST/GraphQL, WebSockets (Socket.IO), System Design, RBAC/IAM

Cloud & Databases: AWS (Bedrock), PostgreSQL (Neon), Redis (Caching), MongoDB, Avian, Docker, Git, Linux/Bash
